My wife and I are always looking for more ways to incorporate more plants into our home decor, and this zen garden is a unique way to do just that! All of the parts seen here in black can be 3d printed, and the corner area is just large enough to plant a succulent, cactus or other small plant.

**Printing Instructions:**

- STLs already in suggested printing orientation
- No supports needed

**Required Parts/Tools for Assembly:**

- **3D Printed Parts**
    - 1x - Zen Garden
    - 1x - Torii
    - 1x - Rake (for straight lines)
    - 1x - Circle Rake (for a perfect circle)
    - 1x - Bench
    - 1x - Meditation Figure
- **Other Parts**
    - Sand to fill basin
    - Rocks to line perimeter
    - Dirt and plant for corner (or whatever else you want to put there!)
- **Tools**
    - Planting tools

**Assembly Instructions:**

I would recommend planting the plant in the corner first, then proceeding to fill basin with sand and perimeter with rocks. Pretty straightforward! To use the circle rake, place the long tooth at the center of where you'd like to make a circle, and spin it about that point.
