I needed a proper storage solution for my small parts like magnets, screws, ball bearings, etc. in my workshop, so I fired up CAD and printed it. I will continue to optimize this box and add labeling plates, other drawers, and wall mounts in the near future. If you download it, please leave a like and feel free to leave a make or criticism. Thank you.

#### Added a Box with "Ears" ####

#### I also added a pair of tweezers to remove small screws. Thanks to Kusal Tennakoon for the tweezers. ####
