Summary

This support keeps the heatbed cable from dragging on the workspace and restricts movement in the control box.

This is version 2 of my original SV06/SV06+ heatbed cable support design. This variation is a one-piece cable support and it's super easy to install. No tools are needed, and you do not have to remove any parts. Once mounted, insert the cable into the channel and secure it with a zip tie. This simple upgrade keeps the heatbed cable from dragging on the work surface and rubbing on the plastic cover at the back of the base frame. This small upgrade also restricts the movement of the cable coming out of the control box. This is an easy print, and you don't need supports. Please post your makes.
