These are replacements for Sovol SV06 extruder, screen and belt tensioner knobs.

I divided belt tensioner knobs into 2 parts so they can be printed facing upwards without supports. You need M4 screw and nut to join them and to use it as knob's thread. I recommend 30 mm screw for Y axis variant and 20 mm for X axis variant.

They are probably compatible with SV06 Plus and other printers that use M4 belt tensioner knobs and 128640 type screen.

I'll probably update this page with more Extruder Knobs design in the future.
