This is a very highly detailed model created using photogrammetry and manual detail sculpted in by studying the physical object. The subject scanned was a very large male white-tailed deer skull.

This model involved applying the use of a number of new programs that I've learned about lately. I'm very excited to share this with you as it is not only very different than what I typically create but is a really exciting model to print.
Simply Scale the print to fit your printer

Print the model using organic supports.
