Summary

A simple pivoting filament guide made for Sovol's SV01 and SV06

3D Printers > Accessories

Tags: sv01 filamentguide sovol sv06

This is a filament guide for use when the filament spool is mounted somewhere above the location of the printer. The bottom part of the guide pivots according to the motion of the print head while the top keeps the filament in a straight line.

The screw hole spacing and guide clearance was made for the Sovol SV01 and SV06, but it may work for similarly constructed printers.
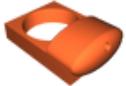

Requires:

- 608 bearing
- some PTFE tubing (about 3 inches or 8 cm)
- Screws appropriate for the printer (I reused the ones from the spool holder)
