Summary

Remixed from MSchwarz's model to improve on cooling capability.

After printing and using MSchwarz's model for a while, I noticed the top cooling fins get little to no air movement, so I decided to spend a few minutes in cad and change the piece a little bit. The duct widens as it gets to the fins and provide air for the top fins as well.

Update: Added a V1.5 version with airguide. I haven't noticed any real difference between the 2 designs.

This remix is based on

Fanmount heatsink 5015 SovolSV06 heatcreep fix
