### Summary

Fix for extruder heat creep on the Sovol SV06 / Plus

[3D Printers](#) > [3D Printers - Upgrades](#)

Tags: [5015](#) [coolingfan](#) [extrudercooler](#) [heatcreep](#)

Printable without supports. Designed for GDSTIME GDB5015 24V. Unobstructed homing. Complete replacement for stock extruder cooling.

V2: lighter design. Fixed cracking issue at screw hole.

Required Hardware:

- 1x M4\*20
- 1x micro JST plug (1.25 SH) (if not already on fan)

Model is designed by me but I took inspiration from @jb\_493618's design (<https://www.printables.com/model/466581-5015-adapter-for-sovol-sv06-extruder>) for an adapter and made a complete replacement.
