updated 8. 8. 2023 | published 8. 8. 2023

### Summary

Arm and alternate mount for attaching camera to front frame using bassamanator's frame mounts.

[3D Printers](#) > [3D Printers - Upgrades](#)

Tags: [sv06](#) [sovolsv06](#) [sv06plus](#)

Arm to help folks mount a camera to their SV06/Plus front frame. Arm has a hole that should accommodate a variety of bolts for camera bases. Step files included if adjustments are necessary. Haven't tested with anything heavier than a basic webcam.

Also included an alternate of the mount that only uses one attachment point in case you want/need to avoid a blockage on the bottom side of the extrusion. Print either this or the original from the base model and 1 or 2 pins as needed.
